

GoCodeGreen, a signatory of The Climate Pledge (TCP) since September 2021, is pleased to announce the successful completion of their Alpha Pilot and their own certification as a Carbon Neutral Software Product.

Over the last few months, working with a number of financial services and FinTech clients, they have proven that their platform to assess the carbon emissions related to software products, which covers the full GHG Protocol Product Standard lifecycle stages and Scopes 1, 2 and 3 - is ready now to scale.

The GoCodeGreen (GCG) philosophy of Measure, Act, Reduce is fully aligned to the ClimatePledge principles of Regular Reporting, Carbon Elimination and Credible offsetting. To bring this to life Eric Zie, CEO of GCG, has ensured that the platform is itself carbon neutral. Having used the platform with his own team to implement all possible carbon reducing actions there was residual carbon to offset. GCG selected Natural Capital Partners and ClimateCare, a fellow TCP signatory, to credibly offset their own platforms software to be a Carbon Neutral Software Product. This means any future client using GoCodeGreen's service to assess the climate credentials of their software production or usage will not add to their own Scope 3 emissions!

GoCodeGreen have now started to work with a range of Banks, FinTechs, technology system integrators and consultancy firms as well as government - to assess their platforms and support their journey toward decarbonising their technology. So if you are digital first or reliant on software to drive your business, reach out to GCG and take positive action toward understanding and reducing your emissions.

Eric says "Collaboration is an accelerator to action and builds our collective impact in addressing the climate crisis. We are proving that we can work together to do good things. Join us."

GoCodeGreen is a **Carbon Neutral** software platform

CARBON OFFSET CERTIFICATE

By offsetting your emissions through ClimateCare's Climate+Care Portfolio, you are supporting projects that make a measurable difference to people's lives as well as protecting the environment

Climate and development projects

All carbon credits are independently verified by an internationally-recognised carbon standard, including the Gold Standard, Verra's VCS Program and the UN CDM.
